

The Valerie and Michael Miller Music Therapy Studio | ADI Negev–Nahalat Eran

Opened in August 2026.

Client: ADI Negev–Nahalat Eran rehabilitation village, home to a rehabilitation hospital, a special education school and residences for people with disabilities.

Contracted by: the hospital.

Funded by: a dedicated gift; the studio bears the donors' name.

During

After

The challenge

Turn an existing space into a room that music therapists can use with several populations (residents, special education students, rehabilitation patients), and that staff can operate on their own.

What we did (April–July 2026)

1. The space as received (April 2026): the existing room documented as the starting point.
2. Planning and measurements: site survey, measurements, drawings and 3D renderings before construction.
3. Cabling and infrastructure (May 2026): signal paths, power, speaker wiring and network backbone.
4. Acoustic treatment and speakers (June 2026): acoustic treatment and speaker placement.
5. Integration and calibration (July 2026): control software, instruments, listening station and verification.

In the room

Smart lighting, acoustic treatment, keyboard and electronic drums, piano and microphones, an audio rack and control desk, a Dolby Atmos listening station, and iPad control with saved scenes and templates.

Why it works

Therapists switch the room to the setup each session needs, with no engineer on call. The room can grow in modules.

Key facts

Duration: about 4 months.

Visits to the studio can be arranged, at times when no therapy session is in progress.
